Customer Reviews

You can't go wrong with this fantastic drug guide! It is listed under generic names but if you don't know the generic name you can look up in the index at the back of the book for the trade name. I had a nurse/lawyer professor for my first year care plans and she wanted it all. This book delivered it ALL: classification, pregnancy category, indications, mechanism of action, contraindications and precautions, adverse reactions and side effects, interactions, route and dosage, availability, nursing implications and even potential nursing diagnoses! Also implementation, patient/family teaching and evaluation. Wow! I've been very impressed. It came through for me so I didn't have to go out and buy another drug book which is saying something! Davis's Drug Guide has even more in the back of the book with many appendixes including: recent drug approvals, additional drugs, combination drugs and ophthalmic meds all that include class, indications, adverse reactions and side effects, route and dosage and contraindications and warnings. Appendix E is about natural/herbal products which is as thorough as the drugs that make up the main part of this book. There are pictures of the intramuscular drug sites, formulas helpful for calculating doses, routine pediatric and adult immunizations, recommendations for the safe handling of hazardous drugs, schedules of controlled substances, food sources for specific nutrients (ie foods rich in K, Na, Ca, Fe, vit K, vit D, low Na, foods that acidify urine as well as foods that alkalize urine), and insulin and insulin therapy. Also throughout the book there is plenty of red lettering amidst the black for high alert warnings where drug overdoses have occurred in the past. The organized, easily found references in this guide could save your client's lives.
